

Builder's Risk

Builder's risk insurance is an important consideration for construction companies, as it covers the risks associated with building a new structure or renovating an existing one. One of the key risks in the construction industry is water damage, which can be caused by a variety of factors including leaks, flooding, and pipe bursts. Kairos Water's smart leak detection and water meters provide a valuable solution to these risks, helping construction companies protect their investments and avoid costly delays and repairs.

IMPROVED RISK ASSESSMENT

With real-time data on water usage and leak detection, insurers can more accurately assess the risks associated with a particular property or construction project.

EARLY WARNING SYSTEM

Smart leak detection and water meters provide early warning alerts when potential issues are detected, allowing for timely intervention and prevention of costly water damage.

INCREASED PRODUCTIVITY

These systems can help identify and fix inefficiencies in water usage, leading to cost savings and reduced risk of damage.

Protects Against :

- Loss of materials or equipment due to water damage
- Delay or disruption to construction schedules due to water-related issues
- Costly repairs or rebuilds
- Damage to finished or near-completed structures

Why Choose Us :

- ✓ Patented asset protection system built for commercial applications.
- ✓ No Kairos customer has filed a water damage claim post-installation.
- ✓ Average 6 month ROI; ROI always achieved within 12 months.
